FNF Thermal-shock-resistant Ceramic Pump

Horizontal ceramic chemical pump for corrosive media under mechanical and thermal loading. Armoured construction with a closed impeller and radial top discharge.

Standard: DIN EN 22858 / ISO 2858

Size range: DN 32-50

Series flow envelope: Q < 80 m3/h

Series head envelope: H < 50 m

Materials: Thermal-shock-resistant silicate ceramic

Shaft sealing: Packing; single or double mechanical seals

Series-level selection reference. The flow and head limits are separate envelopes, not a guaranteed duty point. Confirm current configuration, materials, motor and availability for the project.
